VBA Installation Guide for Microsoft Office 2007 and Microsoft Office 2010

Visual Basic for Applications (VBA) component of Microsoft Office 2007 / Office 2010 must be preinstalled before using PVI2D.

Since Office 2007 Microsoft relocated Visual Basic for Applications (VBA) to a group of optionally installed components. VBA option is included in a typical installation by default; however, removing it will disable all macros and most add-ins.

In order to re-install VBA, run the Microsoft Office setup program and make sure to check Visual Basic for Applications item there. Steps of doing this are described below for Microsoft Office 2007 / 2010.

Step 1. Click Windows Start button and select Control Panel:

Step 2. Select **Programs** → **Programs** and **Features** (Win7) or **Add** or **Remove Programs** (Windows XP):

Step 3. Select Microsoft Office from the list of programs and click on the Change tab:

Step 4. Select Add or Remove Features and click Continue:

Step 5. Expand Office Shared Features by clicking the "+" sign, select Visual Basic for Applications, click Run from My Computer and Continue:
